Gender: Male | **Date of Birth:** 12/28/1974
Nationality: Brazilian | **Address:** Braga – Portugal

PROFESSIONAL RESUME

I have a degree in Information Technology and have been consistently working in this field. Over the past 25 years, I have built a diverse career, performing a wide range of functions that have allowed me to develop generalist skills.

I specialize in programming in InterSystems languages (Mumps and Caché) and have extensive experience as a Systems Analyst, Support Analyst, Implementation Analyst, and in coordination and people management roles.

In shorter-term projects, I have worked with development in VB6, JavaScript, HTML, CSS, Business Intelligence, Project Management, data extraction, and as a Functional Analyst in ERPs such as SAP, Totvs, and Dynamics Nav.

I have experience with RPA (Robotic Process Automation), using the UiPath platform. During this period, I developed new robots, performed maintenance, and acted as a Business Analyst, developing PDD documents with As-Is and To-Be flows in collaboration with the responsible areas.

In terms of business areas, my experience has been primarily in the healthcare sector, both in hospitals and laboratories. I have also acquired knowledge in Human Resources, Telecommunications, and had the opportunity to work with ERPs in the areas of logistics, purchasing, and sales, for clients in various sectors.

I have worked with the Waterfall methodology and am an Agile practitioner, using tools like Jira, Kanban, and PDD, participating in activities such as daily meetings, backlog, and sprint deliveries.

Currently, I am working in the public health area as a technical support analyst with a focus on SQL Oracle.

For my career growth, I am taking a course in "Data Science", focused on Machine Learning, with a focus on Python, R, SQL, and Power BI. In a personal project, I am studying personal finance.

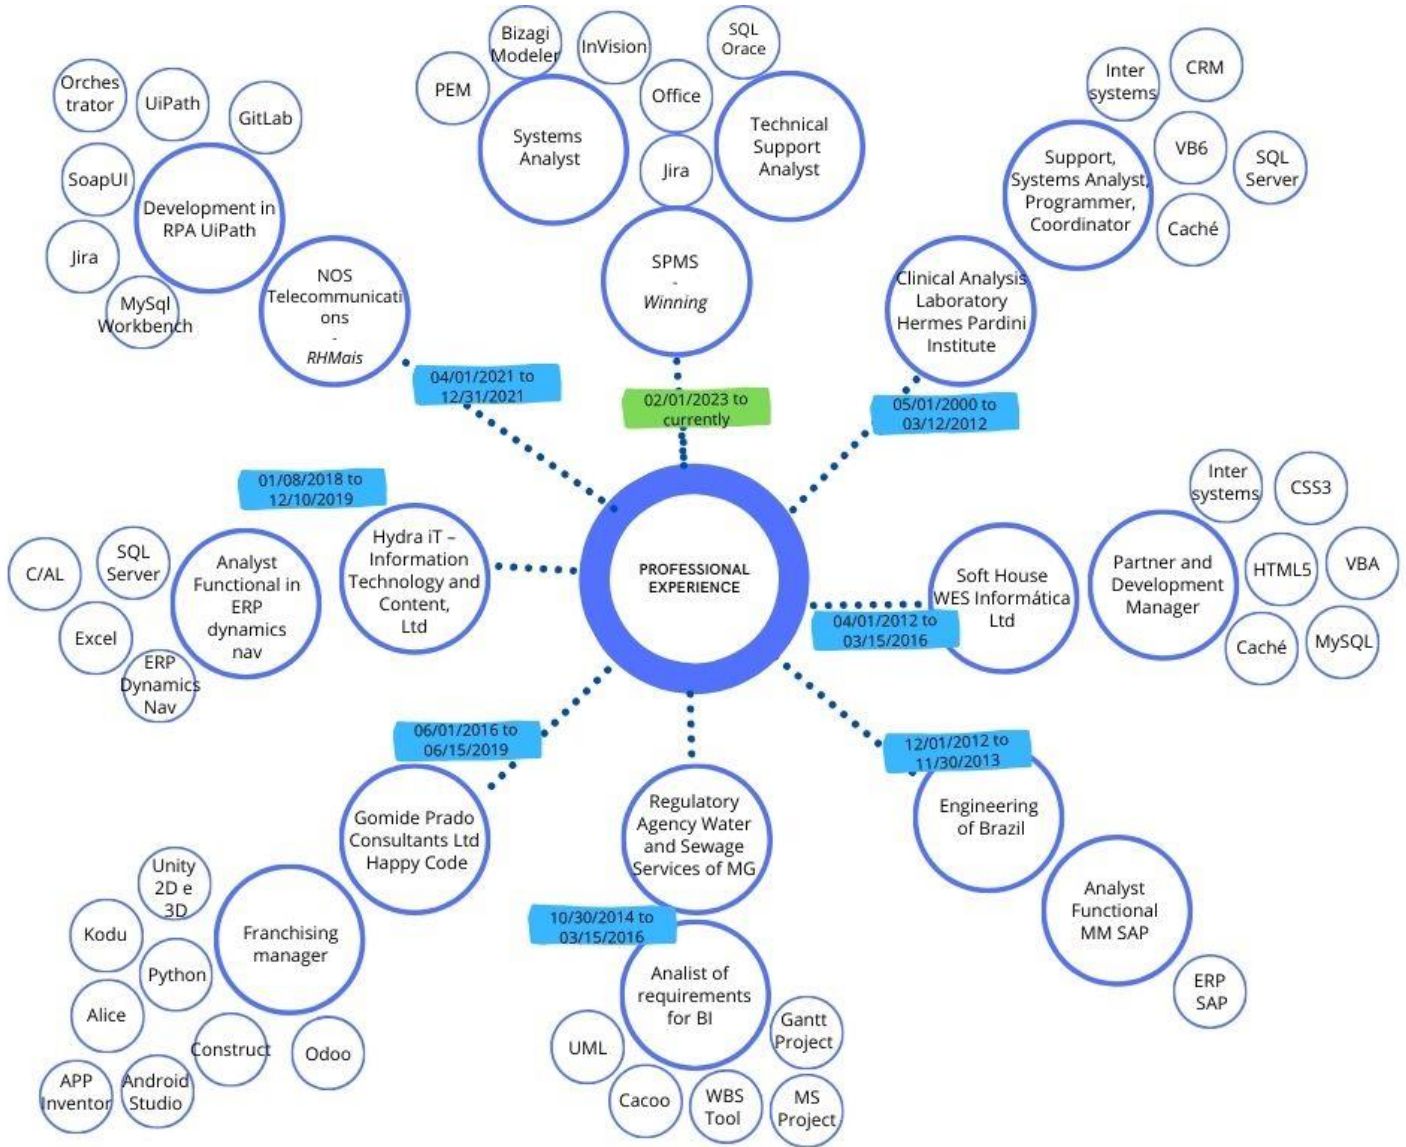

One of my main competencies is the ability to build strong relationships with clients, both internal and external, and to work with a systemic vision, understanding the origin of information and the consequences of changes or improvements in adjacent areas.
